

Overview

A cylindrical heat exchanger with bolted end flanges for disassembly and inspection under the maintenance plan. Connections, heat transfer area, materials and installation are selected for the fluids, thermal duty and available space.

Technical Configuration

Item	Configuration
Brand	IKUSE
Construction	Removable bolted end flanges
Arrangement shown	Vertical body with axial and side flanged connections
Configuration	Materials, heat transfer area, connections and installation
Selection basis	Fluid properties, duty, temperature, pressure and service clearance

Provide allowable pressure drop, fouling information and cleaning requirements. Reserve maintenance clearance according to the approved equipment drawing.
