

Product & Technical Configuration

Overview

Recovers energy from hot boiler flue gas to reduce energy consumption and exhaust temperature. Independent control can be provided. Recovery capacity is determined by the flue-gas conditions and heat demand.

Technical Configuration

Item	Configuration
Brand	IKUSE
Heat source	Hot boiler exhaust gas
Control	Independent control, as configured
Purpose	Waste heat utilization and lower exhaust temperature
Selection data	Gas flow, inlet/outlet temperatures, composition, heat demand and allowable pressure loss
