

Overview

Swivel joints for directional and articulated connections in high-pressure flowlines, with long- and short-radius configurations.

Construction and Configuration

The swivel sections use ball-bearing support with sealing and lubrication provisions. Check connection orientation and bend radius for each configuration.

Key Data

Size	Series rated working pressure
1"–4"	14–140 MPa

Selection

Specify the bore, pressure rating, configuration, fluid and temperature. The series range does not mean that every individual item covers all pressure ratings.
